### Brief description of the contents

---

The goal of the Course From Athens to the West is to make a comprehensive diachronic journey of the Greco-Roman religious ideas and their transmission from Late Antiquity to the European Renaissance. In this sense, the course begins with the main aspects of Greco-Roman culture, such as religion, Greek philosophy and its tradition, and the practical fields of knowledge - to wit, medicine, astronomy, physics and natural sciences. The second part, "Beyond the Greek spirit" calls attention to the roots of Christianity and its development among the diverse communities until the definitive separation in Western and Eastern Christianities. In this context, the new intellectual hybridizations come to the fore in the third part of the seminar by analysing how the classical culture and the theocentric religions are blended from Late Antiquity to the Middle Ages. The fourth section, finally, focuses on the main aspects of the cultural and religious transference from the byzantine horizon to the Western shores: places of contact, travellers, translations and translators, and the main centres of culture and religion.

### Assessment methods and instruments

---

Tools	Percentage
<b>Group or individual globalizing projects</b>	20%
<b>Means of practical execution</b>	40%
<b>Students assignments</b>	40%

**Period of validity for partial qualifications:**

The semester

**Clarifications:**

The evaluation consists on three criteria: 1) "means of practical execution" are QARQs (critical summaries of selected readings), "students assignments" consists of a written final paper (students will have to demonstrate their knowledge about the topic and their skills regarding the commentary of the related texts), and "group or individual globalizing projects" correspond to intervention in the debates around certain key topics of the course.

Regarding the written paper, grading will take into account plagiarism and the use of AI when substituting the personal effort of the student, in which case it would entail the automatic failing of the paper. AI use must be declared and clearly explained, the paper must be the author's own, and not present others' ideas, data, words or other material without adequate citation and transparent referencing.

**Sustainable development goals**

Good health and well-being

Quality education

Gender equality

---

*The methodological strategies and the evaluation system contemplated in this Teaching Guide will respond to the principles of equality and non-discrimination and must be adapted according to the needs presented by students with disabilities and special educational needs in the cases that are required. Students must be informed of the risks and measures that affect them, especially those that may have serious or very serious consequences (article 6 of the Safety, Health and Welfare Policy; BOUCO 23-02-23).*
