

CURRICULUM VITAE

IMPORTANT – The Curriculum Vitae cannot exceed 4 pages. Instructions to fill this document are available in the website.

Part A. PERSONAL INFORMATION

CV date	30/01/2024
----------------	------------

First name	María Victoria	
Family name	Aguilar Pontes	
Gender (*)	Female	Birth date (dd/mm/yyyy)
Social Security, Passport, ID number		
e-mail	mvaguilarpontes@gmail.com	
Open Researcher and Contributor ID (ORCID) (*)	0000-0002-3174-8834	

(*) Mandatory

A.1. Current position

Position	Postdoctoral Researcher		
Initial date	01/01/2024		
Institution	University of Córdoba		
Department/Center	Genetics		
Country	Spain	Teleph. number	957218981
Key words	Bioinformatics, Fungal pathogen, Metabolic modeling, Transcriptomics, Proteomics, Metabolomics, Comparative genomics		

A.2. Previous positions (research activity interruptions, see call)

Period	Position/Institution/Country/Interruption cause
01/01/2022 - 31/12/2023	María Zambrano Postdoctoral Fellow / University of Córdoba / Spain
01/10/2019 - 30/09/2021	Postdoctoral Fellow / Concordia University / Montreal, Canada
01/01/2014 - 30/06/2018	Predoctoral candidate / Westerdijk Institute / Utrecht, The Netherlands

A.3. Education

PhD, Licensed, Graduate	University/Country	Year
PhD	Utrecht University / The Netherlands	2018
Master's degree in Biotechnology	University of Córdoba / Spain	2012
Degree in Biology	University of Córdoba / Spain	2011

Part B. CV SUMMARY (max. 5000 characters, including spaces)

Postdoctoral researcher at the Department of Genetics of the University of Córdoba (UCO), studying fungal pathogenomics.

Preceding my formal scientific career, I obtained a competitive undergraduate student fellowship from the Spanish Ministry of Science and Education to join the Department of Genetics at UCO (2010/11). After graduating in Biology from UCO (2011), I performed a 3-month research stay at the Technische Universität Braunschweig, Germany, before enrolling in the Master's degree in Biotechnology (UCO, 2012). In 2013 I completed the course **“Master's degree in Bioinformatics and Computational Biology”** at the Institute of Health Carlos III (90 credits).

In 2014 I joined the group of Prof. Ronald de Vries at the Westerdijk Fungal Biodiversity Institute (The Netherlands) to perform a PhD on **carbon metabolism** in the biotechnologically relevant fungus *Aspergillus niger*. I participated in the functional annotation of the *A. niger* telomere-to-telomere gold-standard genome, which I used to build a carbon metabolic model. The model predicts fungal catabolic capacities based on the genome sequence (Aguilar-Pontes et al. 2018, *Stud Mycol*). In 2016, I visited the group of Prof. Mikael Andersen at the **Technical University of Denmark** (2 weeks) and the Center for Structural and Functional Genomics at **Concordia University**, Canada (3 months), to annotate carbon metabolic pathways in *A. niger* strains with industrial relevance (Brandl, Aguilar-

Pontes, et al. 2018, *Fungal Biol and Biotechnol*). Additionally, I was involved in several other projects studying carbon degradation by fungi, resulting in 16 publications. In December 2018 I obtained my PhD degree from Utrecht University.

In 2019, I joined the group of Prof. Adrian Tsang at the Concordia University as a postdoc to explore the **genomic mechanisms of thermophilia in fungi**. My motivation was to expand my technical knowledge to approach biological questions from a genomic perspective. During my two years as a postdoc at Concordia University I continued developing my skills in genome assembly and annotation. Early in the project I became aware of new data generated at Department of Energy Joint Genome Institute together with the Sandia National Laboratory and the University of New Mexico (US) resulting in a long-lasting collaboration. This project resulted in the publication of **23 new genomes** from thermophilic fungi (Steindorff, María Victoria Aguilar-Pontes, et al, *in preparation*). Moreover, I participated in two international consortia. For this work I was awarded a Top-up Salary Grant from Concordia University.

In 2022, I obtained a **competitive María Zambrano contract** from the Spanish Ministry of Universities to join the group of Prof. Antonio Di Pietro at UCO to work in the fungal cross-kingdom pathogen *Fusarium oxysporum*. My project focuses on the use of **-omics data to address fungal pathogenicity**. Since my incorporation to the group, I obtained a competitive **UCOLidera 2023 project** to study transcriptional regulation (10.000 €), **led a collaboration** with Nicholas Geoffrion at **McGill University** (Canada) (Geoffrion, Aguilar Pontes, under revision in *Front Bioinform*) and collaborated with Dr. Amey Redkar, at **National Centre for Biological Science** (India) (Srivastava, et al *Ann Rev Phytopathol*). Additionally, I am **leading a new *F. oxysporum* telomere-to-telomere genome annotation effort** with the group of Prof. Toni Gabaldón at IRB, Barcelona. I collaborate daily with pre- and postdoctoral researchers of the group and have generated several bioinformatic applications for *in-house* use. Additionally, I implemented the group's Data Management Plan.

I am **accredited as assistant professor by ANECA (PAD)** and am actively collaborating in **teaching** in the **Biology Degree** (5 credits, 2022/23 and 2023/24) and in the **Master of Biotechnology** (1 credit, 2022/23 and 2023/24) as well as in the Postgraduate program of the Netherlands Bioinformatics and Systems Biology Research School (2022 and 2024). Together with **another Professor** at the Department I am **developing a new course** entitled “Computación, interpretación y presentación de datos en Biología” which will be taught in the Biology Degree (4th year) starting in **2024/25**. I currently co-supervise 1 TFM and 1 TFG at the Department of Genetics.

I am the author of 28 scientific articles, 4 as first author, including 3 reviews and I am corresponding author of a book chapter. Currently I have a total of 603 citations, h-index = 12 by WOS and 886 citations, h-index = 15 by Scholar. I have presented my research at 19 national and international conferences, including one invited and four selected talks. I am Principal Investigator of 1 project and have participated in 13 national and international projects. As an independent researcher I am keen to contribute to the advance of knowledge on the mechanisms of fungal pathogenicity as well as to develop new strategies for studying fungal virulence.
